

Kesri Enterprise

CORPORATE CAPABILITIES & PRODUCT PROFILE

DOMESTIC • COMMERCIAL • INDUSTRIAL WATER INFRASTRUCTURE

Technical Engineering Division
Mundra & Gandhidham, Kutch, Gujarat, India

1. PURE WATER TREATMENT INFRASTRUCTURE

At Kesri Enterprise, we optimize consumer health and industrial process capability by providing high-tier filtration solutions designed for high dissolved solids (TDS) and heavy microbiologic profiles commonly found across the region.

Domestic & Institutional Filtration

Engineered for residences, schools, hospitals, and office complexes:

- **Augapure RO System:** Advanced household water purification with multi-stage mineral balancing matrix.
- **Puretech RO System:** Heavy-duty institutional counters processing up to 500 LPH seamlessly.
- **Mineral Controller Units:** Re-introduces regulated calcium, magnesium, and essential alkalinity post-treatment.

Industrial Reverse Osmosis (RO)

High-yield turnkey industrial skid assemblies optimized for continuous operations:

- Membrane arrays featuring automated anti-fouling flush valves.
- High-pressure stainless steel vertical pump arrays for power efficiency.
- Integrated multi-port validation blocks.

Water Softening & Demineralization (DM) Systems

Our ion-exchange softeners remove scaling salts (calcium/magnesium carbonate) to safeguard critical downstream utility assets. For pharmaceutical, micro-circuits, and high-pressure boiler processes, our dual-bed and mixed-bed Demineralization Plants deliver ultra-pure water with minimal conductivity values.

2. WASTEWATER MANAGEMENT & SPECIALISED CHEMISTRY

We deliver certified systems that safely cycle waste effluents into reusable water paths, ensuring absolute environmental compliance for commercial spaces and process manufacturers.

Sewage Treatment Plants (STP)

Utilizing high-performance Moving Bed Biofilm Reactors (MBBR) and Sequential Batch Reactors (SBR) to lower biochemical oxygen demand (BOD) for civic and construction reuse standards.

Effluent Treatment Plants (ETP)

Configured specifically to counter aggressive chemical parameters, heavy oil/grease levels, and complex organic compounds from production plants prior to natural environment discharge.

3. SPECIALTY FORMULATIONS & OPERATIONAL MAINTENANCE (O&M)

Water Treatment Chemicals

- High-performance membrane antiscalants.
- Acidic & alkaline membrane restorative wash powders.
- Coagulants & high-density polyelectrolytes.
- Boiler scaling and corrosion inhibitors.

Technical Services & AMC

- Annual Operations & Maintenance Contracts.
- On-site emergency troubleshooting arrays.
- Comprehensive media refilling (sand/ carbon/resin).
- Plant retrofitting and layout modernization.

Kesri Enterprise

OUR TRUSTED CUSTOMERS

We take pride in engineering high-performance water purification plant arrays and processing systems for leading national and multinational corporations:
