Summary

Senior Full-Stack Developer with **4+ years** in the JavaScript ecosystem (React, Next.js, Vue, TypeScript, Node.js), building data-heavy enterprise SaaS end to end, from PostgreSQL and Node APIs to fast, typed React interfaces. Experienced with AI-powered products, Large Language Model (LLM) integration, context engineering, and AI-assisted development.

Skills

Frontend: React.js, Next.js, Vue.js, TypeScript, JavaScript (ES6+), Redux Toolkit, Context API, React Hooks, Astro, HTML5/CSS3

UI & Visualization: Material-UI (MUI), Tailwind CSS, SASS/SCSS, ECharts, Recharts

Backend & Data: Node.js, Express, PostgreSQL, Sequelize, REST APIs, Real-time (SignalR, Socket.IO)

AI & GenAI: Large Language Model (LLM) Integration, OpenAI API, AI Agents & Agentic Workflows, Model Context Protocol (MCP), Context Engineering, Prompt Engineering, AI-Assisted Development (Claude Code, GitHub Copilot)

Cloud, Tooling & Practices: AWS (EC2, S3, EBS, EFS, Lambda, CloudWatch, STS), Cloudflare Workers, Docker, Webpack, Vite, Git, Agile Methodologies

Quality & Performance: Vitest, Core Web Vitals, Bundle Optimization, WCAG / ARIA, SEO

Experience

Senior Software Developer, ThinkSys Inc, Noida

Apr 2022 – Present

Dwellworks (Corporate Relocation & Destination Services) | Team Size: 12

Jun 2025 – Present

A US-based enterprise corporate-relocation platform that manages an employee's entire international move, from home and school finding through lease, visa, tenancy, and departure.

- Ship React features across 20 independently-mounted SPA bundles embedded in a legacy .NET Razor monolith, holding IE11 support.
- Built a real-time operations dashboard on Redux and SignalR with auto-reconnect and state recovery, tracking every active relocation.
- Built the shared component library – form fields, virtualized selects, advanced data grid, Google Maps views – reused across all 20 bundles.
- Hardened the UI with layered React error boundaries and a stack-trace logger, containing failures to one cell instead of the whole page.
- Instrumented React surfaces with Google Analytics 4 virtual pageview tracking, giving product per-page visibility into user drop-off.
- Work directly with the US client in an Agile environment: requirements, design sessions, feature demos, sprint ceremonies and release coordination.

Tech Stack: React, Redux, Redux Thunk, Vue.js, JavaScript (ES6+), Webpack, SignalR, Google Maps API, Google Analytics 4, REST APIs

CloudForestX (Cloud Cost Optimization Platform) | Team Size: 6

Jul 2023 – May 2025

A multi-tenant cloud cost optimization platform for AWS, managing 200+ enterprise accounts with cost visualization, idle and unused resource detection, rightsizing, and reservation recommendations.

- Built the React and TypeScript SPA behind 40 cost dashboards spanning waste detection, rightsizing, reservations and power scheduling.
- Built Node.js ingestion and REST APIs that pull EC2, EBS, S3 and CloudWatch data via STS cross-account roles into PostgreSQL.
- Architected global account and month filtering in Redux Toolkit, keeping every dashboard in sync from a single selection.
- Built the data-visualization layer – charts, gauges, geo maps – on ECharts and Recharts behind a reusable chart hook.
- Built a typed API layer and a generic fetch hook with request-id guards, eliminating stale-response races across 36 service modules.

Tech Stack: React, TypeScript, Redux Toolkit, Context API, Axios, ECharts, Recharts, Material-UI (MUI), Socket.IO,

Node.js, Express, PostgreSQL, Sequelize, AWS SDK

DentScribe (AI-Powered Dental Documentation Platform) | Team Size: 10

Oct 2022 – Jun 2023

A US-based AI-powered healthcare SaaS for dental practices that converts patient visits into signed SOAP notes and writes them back into the practice management software, saving 40-50 minutes per visit.

- Built the React and TypeScript portal for a multi-tenant clinical product: 19 surfaces spanning clinical review, billing and admin across four user roles.
- Built the report review surface for AI-generated clinical notes – tabbed note, transcript, aftercare and coordinator sections with per-section editing.
- Integrated the portal against a queue-backed AI generation pipeline, surfacing report state and triggering writeback into the practice's management software.
- Structured the portal on 10 Redux Toolkit slices with global auth middleware and route guards deriving access from role, tenant and subscription state.
- Worked directly with the US client on requirements, demos and release cycles, coordinating API contracts across the backend and mobile teams.

Tech Stack: React, TypeScript, Redux Toolkit, Material-UI (MUI), MUI X Data Grid, Stripe, Axios, REST APIs, PostgreSQL, AWS S3, OpenAI API

MyWorkMyDay (HR Management System) | Team Size: 7

Apr 2022 – Sep 2022

An HR management SaaS serving 20+ business clients with employee management, payroll processing, and performance analytics.

- Built the platform's core surfaces: employee management, payroll processing and performance analytics dashboards.
- Created reusable, typed React components and custom hooks for form validation and data fetching, adopted across the platform.
- Implemented role-based access control (RBAC) across user roles, gating both route access and in-page actions.
- Cut redundant search API calls 50% with request debouncing, and reduced re-render cost with React.memo and useMemo.

Tech Stack: React, React Hooks, Redux, TypeScript, Material-UI (MUI), Tailwind CSS, REST APIs

Projects

GradeJar

gradejar.com

Local-first gradebook web app for teachers. A no-login, browser-persisted gradebook with rosters, assignments, and custom grading scales, running entirely client-side with zero backend.

Tech Stack: Astro, TypeScript, Cloudflare Workers

JsonBeam

jsonbeam.com

Fast, ad-free JSON formatter and validator. Built static-first for sub-second loads and search visibility, deployed on the edge.

Tech Stack: Astro, TypeScript, Cloudflare Workers

Education

Full Stack Web Development, Masai School

Jul 2021 – Apr 2022

- Specialized in MERN Stack and JavaScript ES6+ with hands-on experience in 11+ major and minor projects.
- Developed end-to-end solutions across frontend, backend, databases, and deployment.
- Demonstrated strong proficiency in React, React Hooks, Node.js, Express, MongoDB, REST APIs, Git, and Agile workflows.

Bachelor of Technology (B.Tech), Mechanical Engineering, Marwadi University, Rajkot

Aug 2013 – Jul 2017

Certifications

GitHub Copilot Beginner to Pro – Udemy (Aug 2025)

Edchart Certified React JS Developer (SME) – Credly (Jul 2025)
